Learn about other types supported by the columns APIs

The monday.com [columns](#) APIs enable you to create, read, update, and delete columns.

The types below are used by the columns queries and mutations, and are not independently queryable.

ColumnCapabilities

An object containing the column's capability settings.

Field	Type	Description
calculated	CalculatedCapability	The column's capability settings.

CalculatedCapability

An object containing a column's calculated capability settings.

Field	Type	Description	Enum Values
calculated_type	ColumnType	The type of calculated value.	
function	CalculatedFunction!	The function to calculate the parent values.	COUNT_KEYS MAX MIN MIN_MAX NONE SUM

ColumnCapabilitiesInput

An object containing the input configuration for a column's capabilities.

Need help? Ask AI!

Field	Type	Description
calculated	CalculatedCapabilityInput	The input for configuring a column's calculated capability settings.

CalculatedCapabilityInput

An object containing the input settings for a column's calculated capabilities.

Field	Type	Description
calculated	CalculatedCapabilityInput	The input for configuring a column's calculated capability settings.

CalculatedFunction

An enum containing the functions used to calculate column values within column capabilities.

Field	Type	Description	Enum Values
function	CalculatedFunction!	The function to count the values. If not provided, the default column type function will apply.	COUNT_KEYS (label count) MAX (maximum value) MIN (minimum value) MIN_MAX (both minimum and maximum values) NONE SUM (sum of all values)

ColumnMappingInput

An object containing the mapping between source and target columns across boards.

Field	Type	Description
source	ID!	The source column's unique identifier.
target	ID	The target column's unique identifier.

ColumnType

An enum containing the available column types that can be filtered, read, or updated in queries and mutations.

auto_number	board_relation	button
checkbox	color_picker	country
creation_log	date	dependency
doc	dropdown	email
file	formula	hour
item_assignees	item_id	last_updated
link	location	long_text
mirror	name	numbers
people	phone	progress
rating	status	subtasks
tags	team	text
timeline	time_tracking	vote
week	world_clock	unsupported
